

MultiHejs[®]

Your partner for professional window hoists

AN INNOVATIVE AND CREATIVE COMPANY

We are a company that is focused on effective aids designed to handle heavy lifting. We work continuously on the further development of current products and on the development of new ones.

Save time and money!

With MultiLift you get exceptionally competitive prices for the window hoist you are looking for. In addition, you will be able to spare yourself and your employees from heavy and difficult window lifting, glass lifting and unmanageable skylight mounting.

So you invest in a smart, easy, modern window hoist, and at the same time you improve working conditions, which ultimately gives happier employees with fewer sick days.

Thus, a window hoist contributes to more efficient use of working time and it is also easy to install, adjust and move. This saves you money and time and not only removes the burden of heavy lifting from you and your employees, but also improves the entire workflow.

Our products can be used by everyone and are designed with a focus on safety, working environment and quality. Our window hoists and our other products are all made of aluminum to minimize weight during transport and moving. Our products are CE marked according to the Machinery Directive.

Transverse bar

Transverse bar, for use in the absence of crossbar, mounted with fender. For mounting at the end of the hanger (optional equipment)

Trolley

When moving MultiLift, the trolley can be hooked onto the base. (optional equipment)

The advantages of MultiLift

- MultiLift is easy to handle and transport.
- The window hoist saves the window installer from having to do heavy lifting.
- With MultiLift products you save money.
- A window hoist that can be adapted to most mounting tasks where other hoists have to give up.
- Adjustable height. The angle of the hanger is adjusted when the overhang is in the way.
- MultiLift can be used indoors and outdoors.
- MultiLift is also produced for your scaffolding.
- Folded up, it takes up no more space than a stair ladder.
- Can be assembled in less than five minutes.
- Easy to move, with wheels on ground and wall.
- Made of aluminum, easy to handle and maintain.
- We produce special lifting yokes on demand.
- With the window hoist, you comply with the Working Environment Act for heavy lifting.
- The products are CE marked.

The Portal-Lift is a simple and easy lifting tool for skylight mounting from the outside

For larger renovation tasks, skylights can now also be mounted from the outside with the newly developed Portal-Lift.

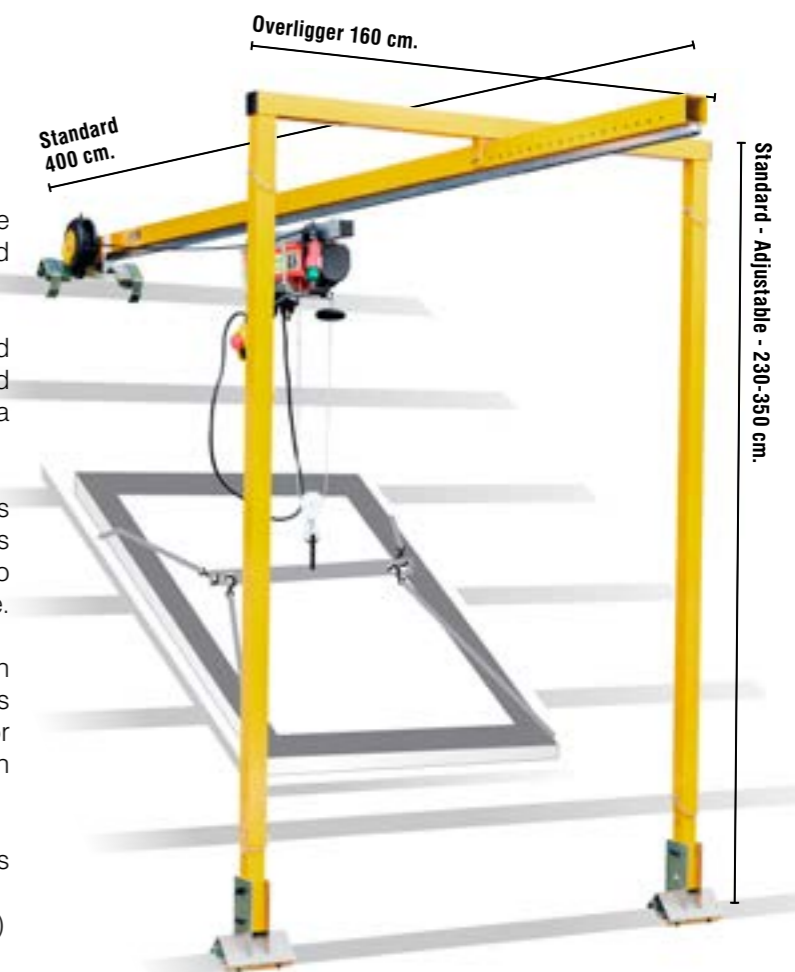

Portal-Lift for mounting skylights, including frame and fittings. The hoist is designed so that it can be adapted to "all" roof slopes. Once set up, it is easily moved via the mounted trailers to the next window.

The top mounted trailer is fixed with locking brackets and you are ready for a new installation. The Portal has been designed to be height-adjustable and adapted to all mounting needs both from inside and from outside.

It can hoist the window from the scaffolding or terrain to the mounting place on the roof surface. Windows are hoisted by an electrical winch and the winch with or without the load is transported to or from the installation point via transport rails. (gate rails)

The window can be hoisted / raised with suction cups / lifting yokes or lifting brackets.

- Portal-Lift total weight, 32 kg. (Separate 4-6 kg per unit)

It's a super strong work buddy!
